# CONDUIT GATE VALVE

A conduit gate valve is a special type of variation in the gate valve that has a circular hole in the closure member that passes a sphere of the nominal size of the specified application. They may require an extra smaller bore at the weld end. The conduit gate valves we offer vary in dimensions, material and features. They are presented in various specifications to suit the need of the client.

# KNIFE GATE VALVES

Knife gate valve is the valve that has a narrow and parallel gate with an edge that is inclined to cut through the substance in the slurries. The valves are made from top quality material to ensure their effective working and long durability. The knife gate valve we provide are made according to industrial specifications and are even customized on customers request.

# HIGH PRESSURE GATE VALVE

This type of valve is especially used when the application area has to deal with high pressure. The high pressure gate valve helps in solving the problem of controlling heavy pressurized flow of substance in the pipe. They are made using latest advanced technology to make the working effective and accurate shut to avoid any kind of leakage.

# HASTELLOY GATE VALVE

Hastelloy is composed of various materials like nickel, chromium, iron and molybdenum. The hastelloy gate valve has excellent property to withstand temperature, pressure and corrosion. They have low carbon content in them to minimize the rate of corrosion. This hastelloy gate valve is preferred by various industries for its great operating capacity in tough conditions.

# GATE VALVE FOR PLUMBING

Gate valve are the most commonly used values in the field of plumbing. They have great ability to control the flow of water by the means of the internal gate to avoid any kind of exchange of water from one side to another. We present an excellent range of gate valve for plumbing applications made according to the location and the requirements of the client.
